

Awk

The image displays four terminal windows arranged in a 2x2 grid, each showing a different awk command and its output. The terminal windows have a dark background with a blue and green patterned border. The top bar of each window shows 'Activities', 'Terminal', and the date 'Mar 17 21:11'. The terminal title bar for each window is 'manishaa@localhost:~'. The first window shows the command 'awk '{print}' sample.txt' which prints the contents of 'sample.txt'. The second window shows the command 'awk '{print \$1}' student.txt' which prints the first column of 'student.txt'. The third window shows the command 'awk '/Linux/' sample.txt' which prints lines containing 'Linux'. The fourth window shows the command 'awk '\$2 > 50 {print}' marks.txt' which prints lines where the second column is greater than 50.

```
# AWK COMMENTS
# 1. Print all lines of a file
# Awk prints all lines by default.

[manishaa@localhost ~]$ awk '{print}' sample.txt
Linux
is
powerful
[manishaa@localhost ~]$
```

```
# 2. Print specific column
# This prints the first column of a file.

[manishaa@localhost ~]$ awk '{print $1}' student.txt
Manishaa
Ravi
Neha
Arjun
[manishaa@localhost ~]$
```

```
# 3. Pattern matching
# This prints lines that match "Linux".

[manishaa@localhost ~]$ awk '/Linux/' sample.txt
Linux is fun
I love Linux
[manishaa@localhost ~]$
```

```
# 4. Using awk with conditions
# This prints lines where the second column is greater than 50.

[manishaa@localhost ~]$ awk '$2 > 50 {print}' marks.txt
Manishaa 75
Neha 90
Arjun 60
[manishaa@localhost ~]$
```
