

SYSTEM CALLS

```
manishaa@localhost:~$ # LINUX SYSTEM CALLS - PART 1

# 1. Process Control
fork()           # Create a new process
execve()         # Replace a process image
exit()           # Terminate the calling process
wait()           # Wait for a child process
getpid()         # Get process ID
getppid()        # Get parent process ID

# 2. File Operations
open()           # Open a file
close()          # Close a file
read()           # Read from a file
write()          # Write to a file
lseek()          # Reposition read/write file offset
unlink()         # Delete a file
stat()           # Get file status
chmod()          # Change file permissions
manishaa@localhost:~$
```

```
manishaa@localhost:~$ # LINUX SYSTEM CALLS - PART 2

# 3. Directory Operations
mkdir()          # Create a directory
rmdir()          # Remove a directory
opendir()        # Open a directory
readdir()        # Read directory entries
closedir()       # Close a directory
chdir()          # Change current directory
getcwd()         # Get current working directory

# 4. Memory Management
mmap()           # Map files or devices into memory
munmap()         # Unmap memory mapped region
brk()            # Set data segment size
sbrk()           # Increment data segment size

manishaa@localhost:~$
```

```
manishaa@localhost:~$ # LINUX SYSTEM CALLS - PART 3

# 5. Process & Signal Management
kill()           # Send a signal to a process
signal()         # Set signal handling
sigaction()      # Examine or change a signal action
pause()          # Wait for a signal
alarm()          # Set an alarm clock

# 6. Inter-Process Communication (IPC)
pipe()           # Create a pipe
dup()            # Duplicate a file descriptor
msgget()         # Get a message queue identifier
msgsnd()         # Send a message
msgrcv()         # Receive a message
shmget()         # Get shared memory segment
shmat()          # Attach shared memory
shmdt()          # Detach shared memory
manishaa@localhost:~$
```

```
manishaa@localhost:~$ # LINUX SYSTEM CALLS - PART 4

# 7. System Information
uname()          # Get system information
gettimeofday()  # Get/Set system time
getrlimit()     # Get resource limits
setrlimit()     # Set resource limits
sysinfo()       # Get system information

# 8. Device Management
ioctl()          # Control device
mount()          # Mount a file system
umount()         # Unmount a file system

# Keep learning, keep coding, Manishaa! You've got this! ✨

manishaa@localhost:~$
```
